KeyOS MultiKey™ Server

Carrier-Class, Studio-Approved Content Security Platform

BuyDRM's content security platform, KeyOS, is a SaaS DRM platform which is operated using both managed hosting and cloud infrastructures. The platform components encompass the full spectrum of DRM requirements including, forensic watermarking, content encryption technologies, rights policy creation and enforcement, license key delivery services and secure content playback. KeyOS represents the evolution of several decades of commercial content security deployments and supports a wide ecosystem of encoders, servers and players.

KeyOS MultiKey Server

This software solution enables in-network, on-premise, in-the-cloud, support for delivering DRM license keys to a broad array of popular consumer platforms and devices using widely-supported consumer DRMs. The KeyOS MultiKey Server can be installed in-network, in the cloud or the location of your choice. Third party encoding or server platforms which perform encryption or third party players do so via the KeyOS APIs as part of the ESP Partner Program. The ESP Partner integrates their technology with the KeyOS Content Encryption Key API for content encryption or the KeyOS License Key API for content playback.

Today's digital consumer expects easy access to content, everywhere and all the time. Period.

Deployment Options

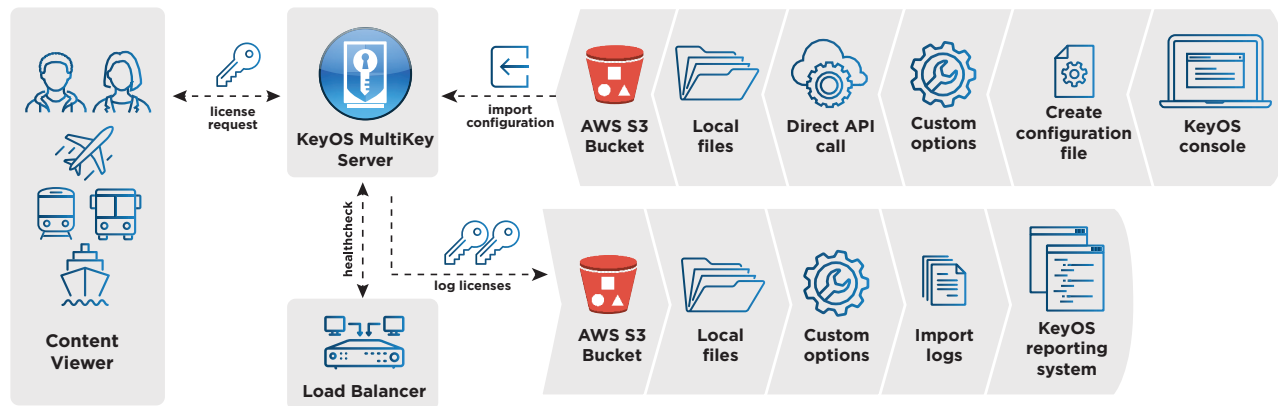

KeyOS MultiKey Server

ON-PREMISE, IN-THE-DATACENTER, IN-THE-CLOUD, IN-THE-VEHICLE

MultiKey Server Workflow
